You're right, the Zobel is mounted off-board. Mount resistor R3 on the interior floor of the cabinet, and run wires up to the woofer, using spade lugs to connect to it. R3 is an 8 ohm, 100 watt resistor, part number 019-020 at Parts Express. They cost ten bucks and mount very nicely to the bottom of your cabinet with a couple of wood screws. C5 is a 20uF, 250V polypropylene capacitor. You can use Parts Express number 027-436.
