Subject: EL34's in parallel - what about my out-put transformer?

Hello all,I was given a chassis with mains trans. filter caps. and an out-put transformer from an old 50 watt (two EL34's in class B I assume).So I was thinking, I'd rather make a single ended thing by planting the two tubes together, but will this work with my transformer?And if so how would I go about hooking it up?Thanks heaps to any one who can help me.have a great day.Jonny.
