re: xover design. Remember these are the 16 ohm versions which never came with xovers and were meant for studio use. The common 604 xovers(masterlabs, Markwart) are for the 8 ohm versions. I was mailed a 16 ohm version xover schematic which is supposed to be the best out there.your pricing is right in the ballpark of what I have in them(minus the research,labour,etc).so you think I should ebay them? craig
