> Nice job on the cabinets! You say you crossed the Alpha 10's> over at 2khz, what crossover did you use, and if I may be nosy, why > the 1165's instead of the 1038's???? Thanks. The crossover is a 12dB. I think a .8mH coil and a10uF cap. The speakers are a little bright around 2K, so itprobably needs shifting down a little. As for the tweeters, I haveboth and favored the 1165's for the extra midrange. It was alsopartly fear of the hump in the A10's around 4.5K. I can't complain.
