Wire the two 4-speaker series separately; Identically but separately. Each should have a + and - line back to the crossover.Yes, you could also run a from the + input to the + of each parallel group (and the same for -) but if your confused already, why bother?
Crossover
 Crossover (-)
(+) |

|(-)speaker(+)----(-)speaker(+)----(-)s
peaker(+)----(-)speaker(+) |
|(-)speaker(+)----(-)speaker(+)----(
-)speaker(+)----(-)speaker(+)
