Brian Smith and David Cope represented Audio Note kits. They brought several kits and parts, including a brand new, yet to be announced mono-block chassis.Audio Note Kits monoblock chassis and DAC kitThe mono-block chassis (shown above) is designed to be modular. The one we listened to is essentially one channel of a Kit 1, which is a SET amp that can be configured to use 2A3 or 300B outputs. A parallel output module can be installed in the chassis to allow for a pair of output tubes to be operated in parallel. Neat stuff!Gobs-O-Goodies in the Audio Note Kits room
