Hi Wayne,

no doors or windovs so it all good

how much in front of the listeners should the forward axes cross?

have you got an opinion on how much power they need to sound their best?

as i am in denmark i would like to just buy the crossover from you, is that possible?

I would like plans for them emailed to bentblaabjerg@yahoo.dk if you would be so kind.

thank you for your wonderfull site and you attitude towards diy'ing YOUR speakers.
