Subject: 2 pi kit.

Hi,

A few years ago a friend built a pair of one pi bass reflex speakers, a kit that he bought at my suggestion.

I am planning for September or before if the confinement is over to start working on a two pi tower version kit to use with my newly assembled DIY loftin white amp.

My queries are:

Is there a possibility to quote the kit with component upgrade in the crossover?

Is it possible to send me a copy of the plans to start the construction of the box while I wait to buy the drivers?

Thanks in advance!

Kind regards from Chile.
