How thick is the spacer in front of the Pi8 speaker?The 8 has 8 internal panels plus the 4 midhorn panels plus the speaker baffle, so which surfaces should be covered with glassfibre damping and which should not?regards,Paul,Australia.

The gasket is 1/4" thick. As for acoustic insulation, I like to fill the rear chamber loosely, including the area behind the flare panels as well as the area directly behind the driver. See the link below for more finishing detail information:Finishing details
