Does the weight of the speaker box actually matter.

I am using "Superlight" MDF. I'm not sure if anyone is familiar with this.

It should be just as dense as orginal MDF, but it is just a little lighter. I'm just curious if weight has anything to do with speaker performance.

I'm not done with mine yet, but they just seem lighter than expected.

ANYONE else out there who has 2pi towers....HOW MUCH DO YOURS WEIGHT??
