I have only 29" clearance between floor and bottom of the screen.

I might be able to elevate the mains on the side of the screen. But if I am to use center speaker it would have to sit on the floor, perhaps tilted up a little.

So the options I have are:

1. all three on the floor
2. mains are on stands, center on the floor.
3. phantom center

which one is a lesser compromise in your opinion?

thank you
