Is there a 3 pi crossover upgrade kit? I have had my speakers for about 4 years. I upgraded the drivers at the time of building but not the crossovers.

Do we send the crossovers in or is there a kit for diy?

Thanks

There are three crossover upgrades available:

1. Upgrade coils from 18 gauge to 15 gauge
2. Upgrade resistors from generic to Mills
3. Upgrade capacitors from generic to Jantzen or Auricaps

The link below describes what you can expect from each upgrade:
UpgradesWe don't sell individual components, but we do sell assembled crossovers with any of those upgrades installed. If you want to modify/upgrade your own, you can buy the components of your choice at any electronics distributor. If you have lost the crossover schematic that shows you what parts go where, let me know and I'll resend the plans.
