Can I get the plans for the 4pi and 7pi?

Trying decide what to build! How does the 4pi work as a center with 7pis in the corners?

You've got mail!

The four Pi loudspeaker is an excellent center channel when combined with seven Pi cornerhorns as left and right channels.

When deciding what to do, please peruse the Pi Speakers FAQ, because it has a lot of information about setup and about the differences between models and options.
