I just realised you pointed me to Andrea Ciffiuli's site and after checking it I like the concept. The Lundahl Iron is very pricey now but here is my thought. Roy Mottram will design and build a PC for that circuit very reasonable price. And take into account less expensive iron specs. I am speaking to him about this and will post any conclusions. Thanks J.R.

The Lundahl's are expensive compared to Hammond, but cheap relative to Plitron's. I priced out the KT88 project in VTV#19 and was blown away at the price. Close to a grand (CDN$) in iron for each channel. No doubt, Plitron and Lundahl made very good iron, but Hammonds are good enough for me.
