Hi guys. I was wondering if we can get a list of tweaks together for some Altec speaker systems...specifically the Valencia's (or others too) My brother has a pair...and we're going to be looking into redoing them. I'd love to hear any suggestions you have! suggestions for the mid-horns...cross-over suggestions...and...We'd like to redo the cabinet, would it be advised to make the cabinet larger? Please keep in mind I'm still a newbie speaker maker...so, if possible, be as in depth as you can. thanks! enjoy the music!

Altec Valencias, swapped out the 806 for an 802 8ohm nicely extended and sweetened the highs. Lots more changes commin' up. The 802 has new diaphrams, might have helped.
