Got one from my Aunt who had it in the basement. Nice shape. I fired it up but the rec tube is bad. Huge transformers; bigger than my Dyna's. I think I am going to replace all the caps and test it. I have the manual and it came with a full set of Mullards. Kinda ugly but the few reports on the net give it good marks for sound.It has nice old bakelite knobs and brushed aluminum faceplate.I got to get going on these old integrated amps laying around here. I should have everything done in time for my son to sell them off after I go into the nursing home.

Wow, cool! Let us know how it works out! Sometimes those mothballed finds are really amazing.
