I ended up buying JBL 2226J drivers. Though 2242 would probably be a better choice for the lowest frequencies, I think six 2226J will do well in that regard too. And I have the flexibility of crossing them high, which was important to me. All are getting separate cabinets (120L) and driven by powerful Abletec ALC1000 class D amps. I should get great response down to about 30 Hz, which is sufficient for music.

The cabinets should get here before middle of august.
