Hi Wayne, just about at wire up stage on my 2Pi towers. Now for perhaps a very stupid question. The tweeter is wired with the direct wires from the plug-in block? Yes? The woofer is therefore wired with the resistance in series to the plug-in block. Yes? or do I have this the wrong way around? Excuse the ignorance. Best Peter B.

You've got it right. Connect the silver line from the straight wire pair to the tweeter's (+) terminal, and the copper one to (-). The other wire pair runs the silver lead through a 0.5mH coil, and then on to the woofer's (+) post. The copper line from this pair goes to the woofer's (-) terminal.
