What are the best online beginners guides to the various parts of audio? I'm hoping we can build a collection of links to free guides that beginners can be pointed at, since it became really obvious in one thread that the advice given wasn't helping because the poster didn't have the background.

I'll start by saying Digital Trends has a pretty good basic guide to speakers and amps: http://www.digitaltrends.com/home-theater/how-to-buy-speakers-a-beginners-guide-to-home-audi o/
