Subject: input/output wiring of 3Pi subwoofer?

---

My current subwoofer just died and I'd like to build a 3Pi sub.

I'm wondering about the input/output wiring: in my current setup, a 2 channel tube amp feeds into the sub and then from the sub the signal goes to two speakers (just left and right channels). Will the 3Pi be able to do something similar? If not, what should I do for the configuration/wiring of a stereo (2.1) system?
