Better late than never I suppose. That is some really good looking audio equipment. Really high end, but the latest update on the site that I've seen was back in 2011.

I sympathize with the site issue. When our web master died rather un-expectantly we were in a lurch for a goodly while. Ours (Oddwatt Audio) is now finally nearing its update. We have found a new web master and he is working on it now. In a week or two if all goes well we will have a new look.

I now have a preliminary design for the high voltage direct drive amplifier ready. It looks good in simulation but I will have to see the prototype to be absolutely sure.

This amplifier will be able to drive up to 2400V peak to peak into at least 5nF with should be enough for a ESL of almost any size.

I am currently working on the printed circuit board but it will be some time before I have the prototype finished.
