My dad's birthday is coming up and I would like to give him a tube amp kit. He has always been handy with tools and I know he would enjoy this so much. It doesn't have to be SE, but rather it not be too complex. What are some easy to build kits that sound nice?Cheers,Honcho

There's quite a lot to choose from. On the inexpensive end, Antique Electronics has a kit that's only \$140 and is probably the best bargain you'll find.

Honcho,I praised the Antique Electronic Supply kit in the thread GarMan cites and continue to do so. It's a circuit board design, so it's easy to build.Let us know how your Dad likes it!

E. Do realize that your garage system, which you subject it to a harsh and dusty environment, is better than 95% of the systems owned by the mass market?
