I'm a relative noob to this kind of thing and I was just wondering, what's the best kind of home system to use with a projector in the house? I'm trying to get that 'cinema' feel.

I have always wondered how I could put a movie theater in my home on the cheap. I was hoping to get some ideas here, but I guess not many people are into using projectors any more.

One of the main benefits, in my opinion, is that you can put the center speaker behind an acoustically transparent screen. That way you don't have to compromise on the center channel speaker. All three front mains should be the same, and should be the best speaker you can afford.
