My sister asked me yesterday if I had heard that George Michael passed away. I didn't know anything about it. She said that everything she read about it said that he died peacefully at his home at the age of 53. Does anyone know what he died from? It's always so upsetting when you hear about things like this.

The last I read, cause of death is inconclusive. 53 is way to young to go. We lost so many celebrities in 2016. Surely 2017 will be a better year!
