Hi guys, Hi Wayne,

I'm going to build a couple of 4Pi, so please Wayne, I appreciate the plans so much

I will use Eminence Omega pro 15A and B&C DE250.

I have a question: I would bring some modifications on the original shape of the 4Pi, because of some ... home design needs.

I was thinking about the Eminence in a 4-5 cubic feet separate enclosure, and the B&C mounted on a Jabo KH-30 horn, something like these:

Do you think is it possible? What about crossover variations?

Thank you so much guys!

That's very attractive!

But it's a whole different beast. Without our waveguide, the design is different. It will have a different radiation pattern, different response and will need a different crossover.
