The gaming headphones I bought from Amazon Basics were affordable, comfortable to wear, and had great sound. However, it's been two months since my purchase and the microphone has already stopped working. Unfortunately, I missed the holiday sales because I had a working device at the time. Which gaming headset would you recommend that is long lasting?

The Asus ROG Centurion headset is a great one and gives extremely clear sound. I've read a lot of very good reviews about it online.

Thanks for the gaming headset recommendation, Pique. Gosh that thing sure is pricey, but I'd rather spend more for a durable headset that will last instead of buying another cheap model that will work for a month or two.

If you are on a budget then it will definitely be a good idea to take your time and really look around before buying a head set.
