Hello, The amp I'm talking about is at the following URL.
http://www.passdiy.com/pdf/ZV8_power_jfet.pdf He is also selling the Firstwatt F3, which I understand is a much fancier implementation. This ZV8 (the one in the Audioexpress article) is so much like a tube amp that it would be easy to explore lots of configurations that I can understand because I have been paying more attention to tube basics.
