Gotcha, that sounds good. That's the direction I would go, for sure. Over the years, I've thrown together a few little circuits like those, some to act as bench supplies, others as shop sound in the garage or whatever. My favorites have generally been simple PS with lots of capacitance and a decent chip amp. I don't really care much for the philosophy of the T amp where quality is concerned although it is an interesting and workable concept, certainly good for making amps that don't weigh much and easy on the power consumption.
