Check out the Chinese tube amps as of late, and you'll appreciate out how little they cost. Some of this stuff is a steal at factory direct pricing. If the cost of shipping can be brought down - now it's about 50% of unit price - these are going to take over the US market. I know in the past Chinese made goods have not had the best reputation for quality, but this stuff is getting scary good. Besides the Cayin, I have a ShengYa S-10 HDCD player, again Chinese made, and this thing is a tank. I don't have the Chinese audio links on my home computer; they're at work (where else). I'll post some of my favotites tomorrow under new link. Kind of getting off the original subject post....Colin
