Well, what happens if you take two SE amps, details aren't too important yet, and bridge them? Do the phase splitting well, and load the secondary properly. Compare to a PP amp running what is effectively the same load (2x SE load). Both topologies cancel the 2nd harmonic equally well. Both set-ups have the same power. One has to deal with DC on the core, while the PP should not. any predictions on sound quality, better yet, anybody have a spare pair of SE amps?
regards, Douglas
