Subject: lookin' for the Bridge... Posted by PakProtector on Sat, 19 Feb 2005 02:24:06 GMT View Forum Message <> Reply to Message

Well, what happens if you take two SE amps, details aren't too important yet, and bridge them?Do the phase splitting well, and load the secondary properly. Compare to a PP amp running what is effectively the same load (2x SE load).Both topologies cancel the 2nd harmonic equally well. Both set-ups have the same power. One has to deal with DC on the core, while the PP should not.any predictions on sound quality, better yet, anybody have a spare pair of SE amps? regards,Douglas
