I refer to the Welborne DRD 45's. Just got 'em playing today with all new (old) tubes. Gonna require a lot of break-in. With pre-amp they don't get loud until 3 o'clock which is raucous with all new parts. The ingredients are there, tho'. Incredible repro of cymbal and guitar with that certain 'in the hall ambience' you get with the best 45 and 300B amps. The tranny's are really cool after many hours; ditto the tubes. My 'Summer' amp.
