Dear Doug  
Thanks for responding. This meter has been set up correctly. I started listening to them with KT66 ends (I have a switchable Triode or UL). They sound very sweet. STEREO IMAGE is as good as I have ever heard. Fantastic almost spooky effects. The speakers are about 3-4 m away in room corners. In some cases I am getting images directly to the side and well beyond room limits. I am not even on the Vodka! Female vocals, jazz type sounds are excellent. The picture is in sun. The boxes are a bit darker. I was aiming for a sort of industrial VNV Nation look. Apparently I can convert them to run 300B? But I think the flexibility of using KT88, EL34 or 6L6 should be enough to keep me interested. It has been a great project. I highly recommend it to anyone.
