Hi everyone,After retinking my previuos request for a 20 watt SET design. I realized that I am asking for the impossible when I excluded an 845 and VV52 from the design, or the EML 520B.If anyone can help guide me to any good SET designs that are capable of getting 15 watts or greater, it will be greatly appreciated?Any output tube will be considered for use, triode, tetrode or pentode.ThanksNorris Wilson
