A friend who restores old radios told me about that place around 4 or 5 months ago, after I bought Antique Electronic Supply's last two Miller 10.7 mHz IF transformers with the correct topology for the Dynaco FM-3. If the slugs ever seize up in those dread little beasties, you can forget it!He claims that the owner is a really sharp guy who'll go out of his way to sift through his tons and tons of stuff to help you out. My friend claims that they have any and every thing you can think of, and even a lot of stuff you HAVEN'T thought of, that his stock is just unreal. Thermionic
