Thanks a million, Wayne. Just what I thought. The reference was really terrific! A great read and a great refresher. As I recalled, the best sounding amp ought to be a push-pull triode amp operating in class A or AB.I'm still using my old ultra-linear Wiliamson amp -in my organ I think. I don't think it was a kit and it did use a peerless (altec) output transformer as I recall. For serious power I use solid state but very conservatively rated.-Dick
