Wankel engines! That was the first RX7 am I correct? I remmember thinking what a bargain at 7000.00\$ when they first came out. Anyway there must be some sort of speed adjustment available on any flywheel driven device in order to keep constant speed,no? Thats why they need the feedback loop I thought. Help us out here. As far as antiquated technology I still ride my 1964 Norton Atlas every summer. I have an engineer buddy who thinks i am a lunatic for messing with tubes. He claims tube amps make great boat anchors. It's all good!
