Thats great to hear, i would be interested, if for no other reason my black widows instuction manual shows a 103 mounted on it. I didn't realize you had a 103. Can you tell mw about its characteristic sound as compared to some of the other carts you have experience with? I assume its weight/mass and compliance are correct for my arm. Unless the photographer just bolted on the nearest cart. My arm will use carts with weights from 4 to 8.5 grams. I am looking for a signifigant step up from my ortofon OM 30. Do you think it would be? Regards,
Russellc
