Sounds like it's all good. The page count isn't high, but I think content is more important, especially for something like this.Think of magazines that have several hundred pages, but 90% of it is full page ads. They're more like catalogs of wish lists than anything else. So if a specialty magazine has a handful of really cool articles, it's worth the money to me, even if the page count isn't all that high.
