---

Has anyone experienced the problem with the Garrard Lab-80 where the power switches (either Manual or Automatic) will not stay "ON"? Motor turns when switches are held on-so motor is OK. On removing platter, it appears that the arm connecting the paddle-type switches on the outside is not moving enough to make contact inside the turntable. Have SAMS service manual but that doesn't help much. If anyone has had similar problem, I would appreciate any help I can get. Really like the old LAB 80 and would like to get it running again. Thanks-Cheers-Dave
