Subject: Sony LX250H BIG Problem Posted by bpage on Fri, 22 Apr 2005 06:09:10 GMT View Forum Message <> Reply to Message

Hey everyone,My Sony PS-LX250H turntable has a severe problem, well at least very annoying for auto play. When i press the "start" button, the arm moves normally up to the record, lowers the stylus, then plays it... But unusually 2-3 seconds after the stylus has touched the record, the arm just lifts back up again, gets back in its "off" position, and stops the turntable. Could anyone help?ThanksBpage
