I just bought a Thorens TD-145 the auction stated that it had a MA 2002 needle which I can't find any info on. The seller is out of town until the weekend and will be sending me the actual cartridge info then. Any recommendations for a good reasonably priced cartridge for use with the stock arm. The turntable will be feeding a Carver receiver. From what I've read the Ortofon Super 20 or Super 30 seems pretty good. ThanksLe
