Dear manualblock,Yes, the turntable was made in 1985 and it is a decent one, if not the problem that I am having.My pre-amp has only two input channels and two output channels, nothing else, and it is specifically a phono (turntable) pre-amp. Unfortunately, I do not have another pre-amp, but this one is fine. I tried running other devices through it and there was no hum.I did check the continuity of the grounding wire from the RCA to the ground on the chassis and it is fine.Yes, I am to troubleshooting the problem.Thanks for helping!
