Hello!Two weeks ago or so I posted here about fixing my old 1985 Dual CS-505-2 turntable. To those who forgot, my turntable produced an awful hum.Well, I decided to buy a brand new one. (I am still going to fix my old one, but I want a new one as well.) I am not a DJ and thus I do not need DJ features, although I do need a great hundred percent analog sound.I really do not want to select it by brand and instead, I want to select it by quality. One of the most important qualities to consider is of course the signal-to-noise ratio. Another one is wow and flutter.I have looked at various turntables in local stores here in Toronto, as well as on manufacturer's websites (whatever I was able to find). The turntables offer a >60 to >50 dB signal-to-noise ratios (the higher, the better) and
