Eric, have you had any luck with your power supply? I have a TD105 MK II also without a power supply. Does your's have a sticker on the back panel, mine does. It says U min (=or>) 10v~, I max = 250ma. I have never seen a Thorens power supply for 10v so am unsure as to what I could use, so this turntable is sitting on the shelf collecting dust.
