Hi I've just bought an SL BD22 turntable which I've connected to my Technics amplifier. The first turntable I had connected via wires to the turntable and was fine. However the SL BD22 has a ground wire connection which it says to connect to the GND connection on my amp. I've done all this and connected the red and white leads, but the turntable will not turn and the stroboscope will not light up. Any ideas on solving this problem? PS I've checked plugs and belt on turntable
