HI Peter,I would try a transport for around $1000 with a DAC for the remainder. For that money you can buy many dacs, and audiotion. Here are some examples:1. Ack! Dac2. Scott Nixon Tubedac+3. Museatex bitstream4. Museatex bidat5. Benchmark dac-16. ECD1 by electrocompaniet7. Classe dac-1 (used)8. Blue note Ag dac9. Muse dacsAnd many many more. I suspect all of these would sound better than a standalone CD player, as long as they had jitter reduction (many of these dacs do already, for others you can buy a jitter reducer). hope this helpsthanx-akhilesh
