Subject: Denon 3910 availability?

I have seen this unit in Canada already but I wonder if it has shipped in the US? There seem to be plenty of 2900 and 5900 yet in the system and I wonder if Denon is trying to clear them off before shipping. The other thing, Denon may be using Canada as a test market to get any bugs out of the system as sales are a lot lower in Canada than the US on these units. Retail price seems to be $1999 CDN in Canada. US pricing should be more aggressive than the $1299US list. Any thoughts, comments? Thanks,
