Subject: Anyone built a DIY DAC using product evaluation boards?

I am considering doing this as it looks like the biggest bang for the buck approach. My first choice is here:http://www.analog.com/en/prod/0,,761_796_AD1853%2C00.htmlThe eval board is $170.00 and is a complete DAC from SPDIF in to line out. All that is needed is a 15V raw DC supply. Anyone here done something similar? just curious.Thanks, Rob
