What are the white rectangular parts near the output jacks? They look like rectangular metallized poly Wima-type caps but I don't recognize the information printed on them. Are they the "Full Balance LPF using discrete transistor components (four LPF)" described in the DiyClub DAC-68 site? What is an "LPF".<http://www.liteaudio.com/2005-1-22/2005122154743.htm>
